PROG6212 Check List Final POE

HR View:

New role added, HR as "super user".

1. HR adds all users and adds all information like name, surname, email, hourly rate etc.
2. HR can update all user information.
3. HR can generate reports or invoices – can use LINQ for this, generating a PDF for download would be ideal.

There should be no register – HR creates the user profiles and provides the log in details, if there is a register, HR would have to approve the user.

Lecturer View:

Login will need to be added.

1. When logged in and submitting a claim, name, surname and hourly rate should be pulled from what the HR has added. Lecturer should not manually input rate anymore.
2. Should have an auto-calculation, lecturer will mainly only need to input hours worked and documentation. So, when the hours are input then an auto-calculation should show with pulled hourly rate.
3. Validation should be added, if an hourly rate exceeds what a lecturer can work during a month, example more than 180 hours.
4. EF with a database – do not need migration.
5. Lecturers should still be able to view and track their claims as they move through the approval process with the 2 admins.

STILL 2 Admin Views (separate) Programme Coordinator and Academic Manager:

1. Can use custom identity or custom login (do not have to).
2. Can make use of API (do not have to) – if a student has made use of API, markers must be more lenient.
3. MUST make use of sessions.
4. Ensure users cannot access pages they are not supposed to access.

PowerPoint Presentation:

1. Detail updates from part 2 to part 3 based on feedback from lecturer.
2. Detail design and key features (screenshot code and explain) – NOT all code, only key features for part 3.

Version Control:

Regularly commit and push to GitHub. Minimum 10 times, preferably more, with descriptive commit messages.

Documentation:

The read me file needs to be updated with changes made from part 2 to part 3 based on lecturer feedback.

Submission:

On ARC: ONLY your GitHub link.

Inside the GitHub link:

- **Source code.**
- **Read me file with documentation that has been updated.**
- **PowerPoint presentation.**
- **YouTube video link.**
    - o **Make sure your video is "unlisted", NOT private and NOT public.**
    - o **Detailed video showing all key functions.**
    - o **10-15mins MAX.**
